

THATIKONDA SHASHANK

AGENTIC AI ENGINEER

 +91-7977424715

 Hyderabad, Telangana

 shashank21205@gmail.com

ABOUT ME

AI/ML engineer specializing in agentic AI systems, LLM orchestration, and scalable ML pipelines. Strong theory-to-production execution with a focus on system design, optimization, and real-world deployment. Experienced in architecting collaborative AI agents and translating complex problems into efficient, production-ready solutions. Passionate about applying AI to solve high-impact, cross-domain challenges.

EDUCATION

2023 - 2027 St. Martin's Engineering college | Bachelor of Technology | CS(AI&ML)

2021 - 2023 Narayana Junior College | Intermediate | CGPA: 8.88

2016 - 2020 Modern English School | SSC | 84.5%

EXPERIENCE

DexraFlow - Founding AI Engineer | 2025, AUG - DEC - 5 months

- Led development of Dexraflow's core RFP Generator, a key product differentiator, designing scalable logic for automated proposal generation.
- Conducted R&D on dynamic presentation (PPT) generation systems, building automated pipelines for structured content-to-slide transformation.
- Developed an end-to-end image and video processing pipeline to extract semantic content and generate embeddings for efficient multimodal search and retrieval.
- Collaborated cross-functionally with product and engineering teams, gaining hands-on experience in product lifecycle execution and agile workflows.

TECHNICAL HIGHLIGHTS

- Architected a 7-agent orchestration framework for automated, structured RFP generation in a production environment.
- Designed a dual-LLM cross-validation system enabling parallel reasoning and iterative response refinement.
- Built a real-time multimodal video analysis pipeline with dynamic tone-controlled LLM commentary generation.
- Developed SentinelAI, an MVP-ready AI cybersecurity platform for automated external attack surface discovery, adversarial simulation, and risk prioritization.

PROJECTS

Sentinels - AI-powered attack surface intelligence

- Built SentinelAI, an AI-powered cybersecurity platform for automated external attack surface discovery and risk assessment.
- Implemented deterministic risk modeling, simulated adversarial attack paths, and integrated strategic threat intelligence to identify vulnerabilities and prioritize mitigation strategies.

Stadium Crowd Management System - Real-time multi-agent AI for sporting venues

- Architected a 5-agent Gemini-powered pipeline for live crowd navigation with Firebase Realtime Database, composite scoring, and rule-based congestion forecasting.
- Built emergency fast-path (sub-10ms, zero API calls) and deployed full system on Google Cloud Run with Streamlit UI and 40+ mocked pytest tests.

AI Counsel

- Designed and implemented an AI "Counsel" system using dual-LLM orchestration, where two agents process tasks in parallel, exchange intermediate outputs, and iteratively refine responses to improve reasoning quality and output accuracy.

SKILLS

- Language : Python
- AI & LLM Systems: Multi-Agent Orchestration, LLM Prompt Engineering, RAG Pipelines, Embedding-Based Retrieval, Multimodal Processing, Semantic Search
- Frameworks & Libraries: LangChain, LangGraph, crewAI, PyTorch, TensorFlow, Hugging Face Transformers
- Backend & Deployment: FastAPI, Streamlit, REST APIs, Ollama
- System Design & Concepts: Agent Collaboration Architectures, Workflow Optimization

LEADERSHIP & ACTIVITIES

Chair, ACM SMEC Student Body (2026 - Present)

- Led organization of technical workshops and student engagement initiatives while coordinating cross-team execution and planning.

Python domain lead, CodeHoppers (2025 - Present)

- Mentored 500+ students via structured Python workshops, delivering hands-on technical training and curriculum design.
- **Hackathon Organizer:** Led multiple hackathons ranging from 24 to 30-hour inter college hackathons with 750+ participants from 20+ colleges , managing end-to-end execution
